

Themes

There are a lot of built-in themes in ggplot and you can use them in two ways, by stating before your plot to set the theme:

```
theme_set(theme_bw())
```

or by adding them to your plot directly:

```
my_plot + theme_bw()
```

There is also a great library called ggthemes which adds even more built-in themes for ggplot. You can also customize your own themes, we'll have resources for you to do this at the end of the lecture.

Built-in Themes

Let's show some simple examples

In [3]:

```
library(ggplot2)
```

In [4]:

```
df <- mtcars
```

In [5]:

```
head(df)
```

Out[5]:

	mpg	cyl	disp	hp	drat	wt	qsec	vs	am	gear	carb
Mazda RX4	21	6	160	110	3.9	2.62	16.46	0	1	4	4
Mazda RX4 Wag	21	6	160	110	3.9	2.875	17.02	0	1	4	4
Datsun 710	22.8	4	108	93	3.85	2.32	18.61	1	1	4	1
Hornet 4 Drive	21.4	6	258	110	3.08	3.215	19.44	1	0	3	1
Hornet Sportabout	18.7	8	360	175	3.15	3.44	17.02	0	0	3	2
Valiant	18.1	6	225	105	2.76	3.46	20.22	1	0	3	1

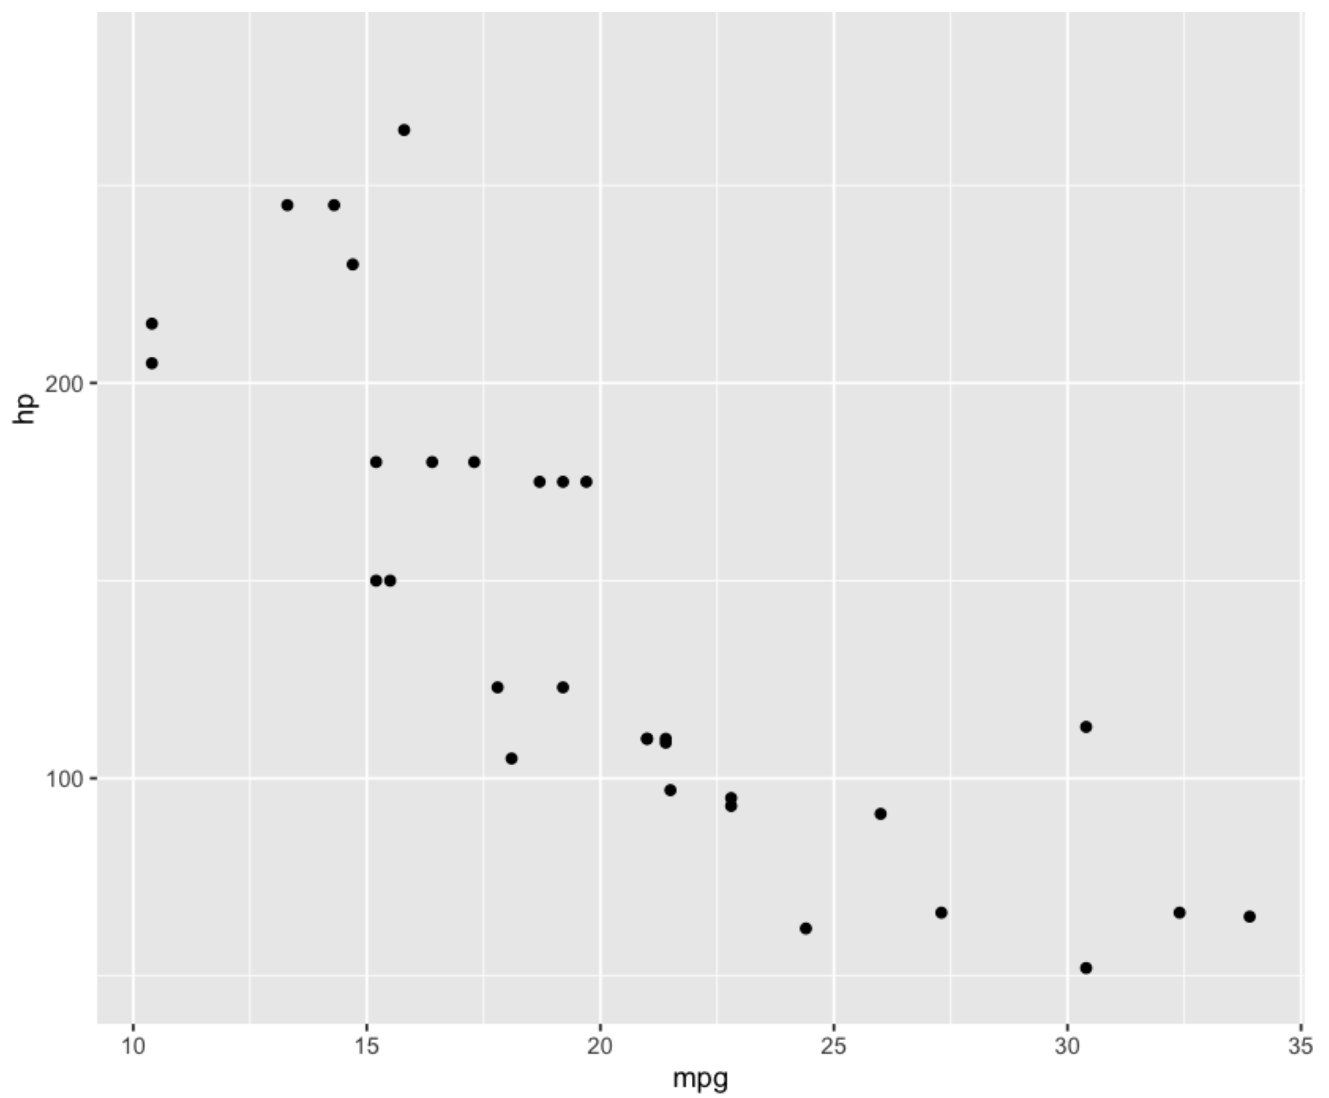

In [10]:

```
p1 <- ggplot(df, aes(x=mpg, y=hp)) + geom_point()
```

In [12]:

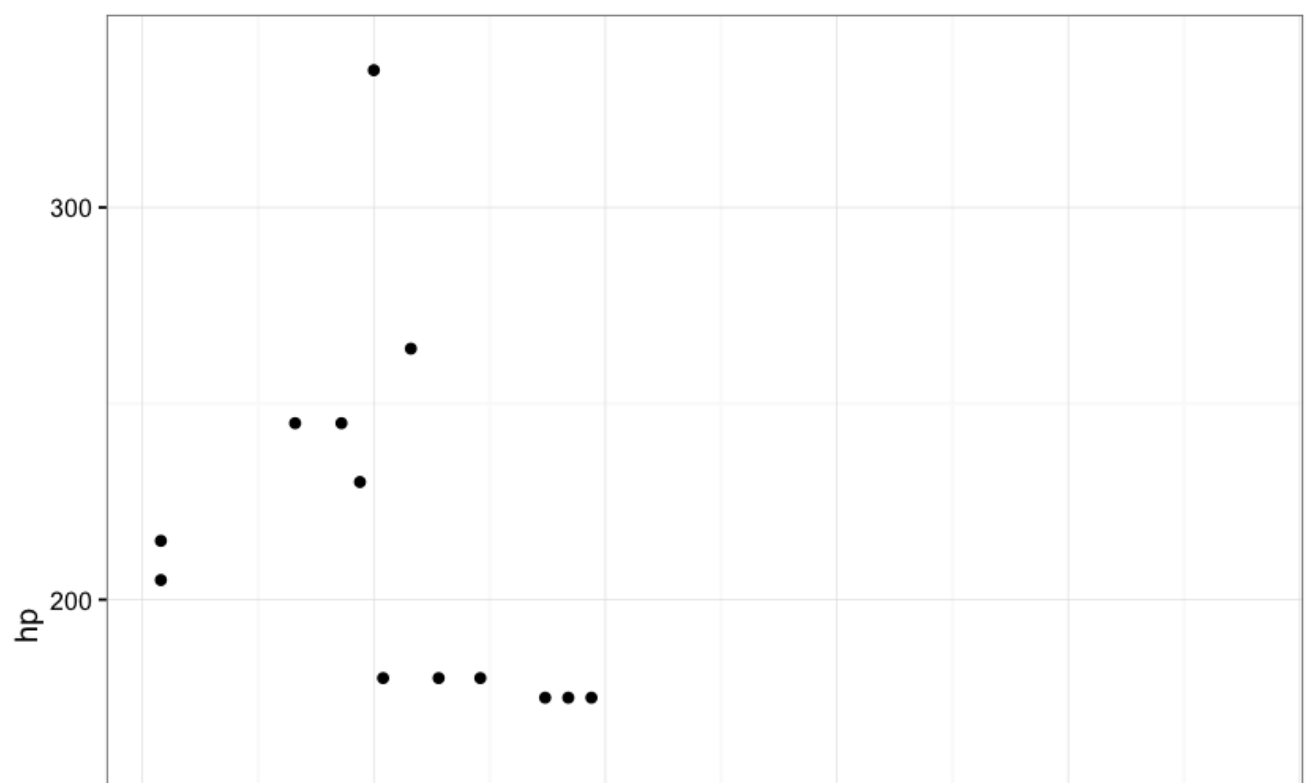

```
print(p1)
```

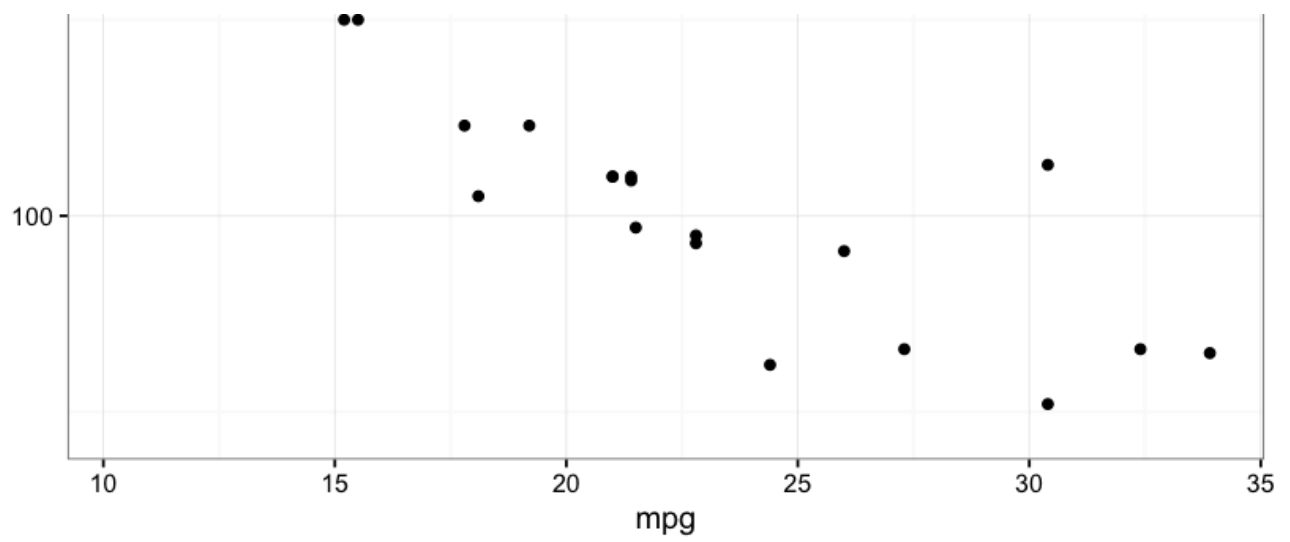

In [14]:

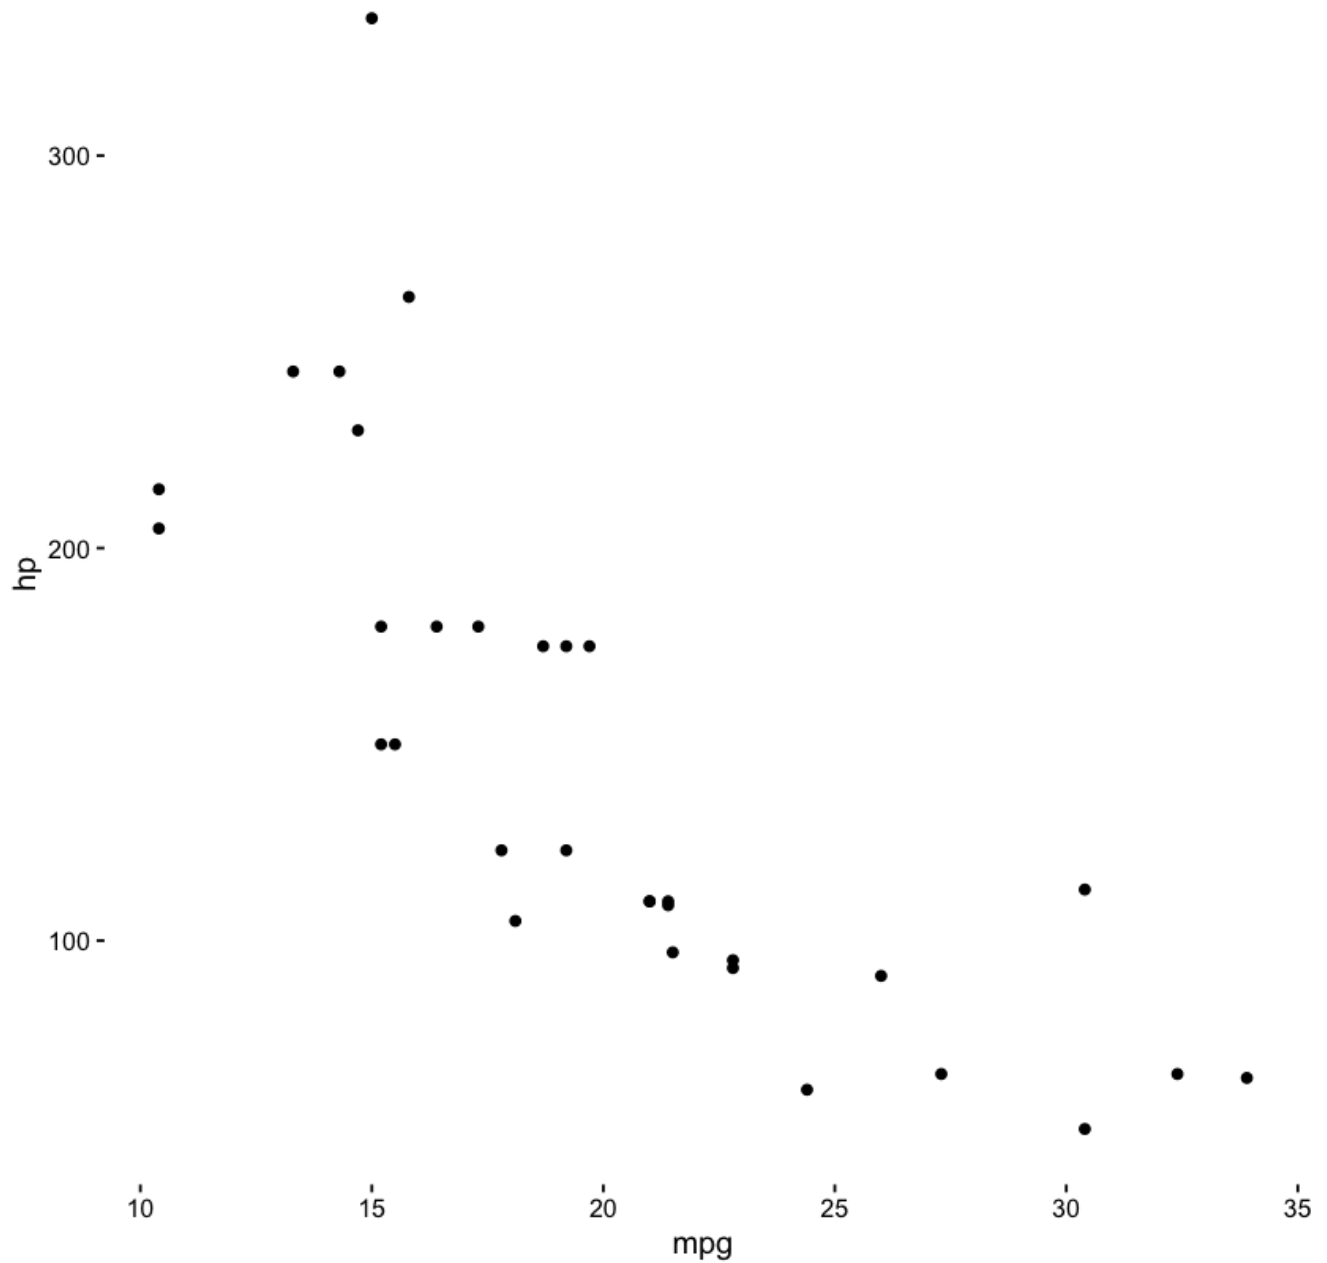

```
pl + theme_bw()
```

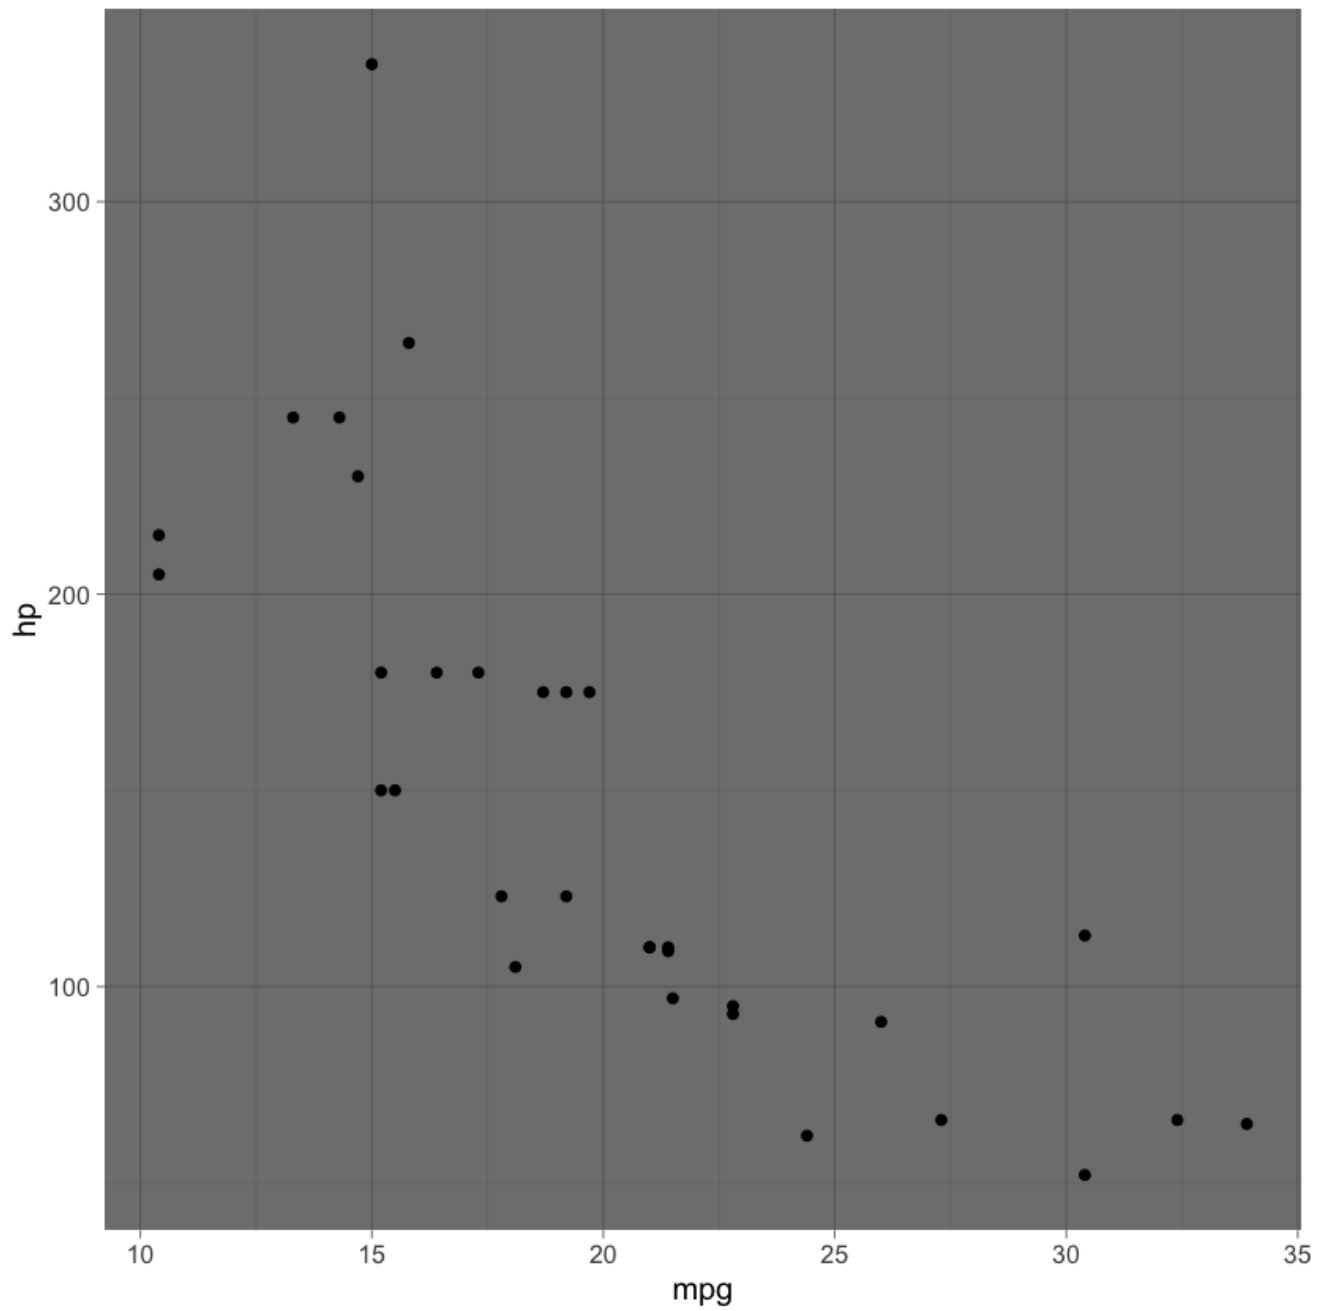

In [15]:

```
pl + theme_classic()
```

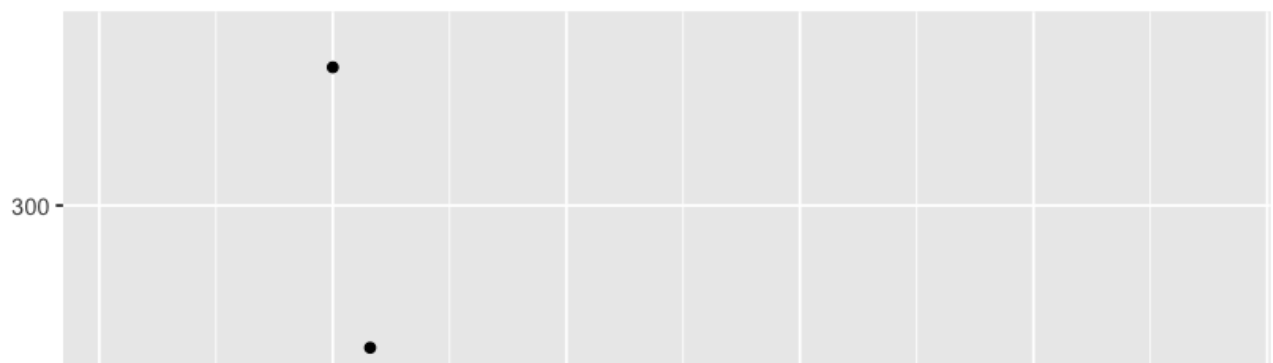

```
In [16]:
```

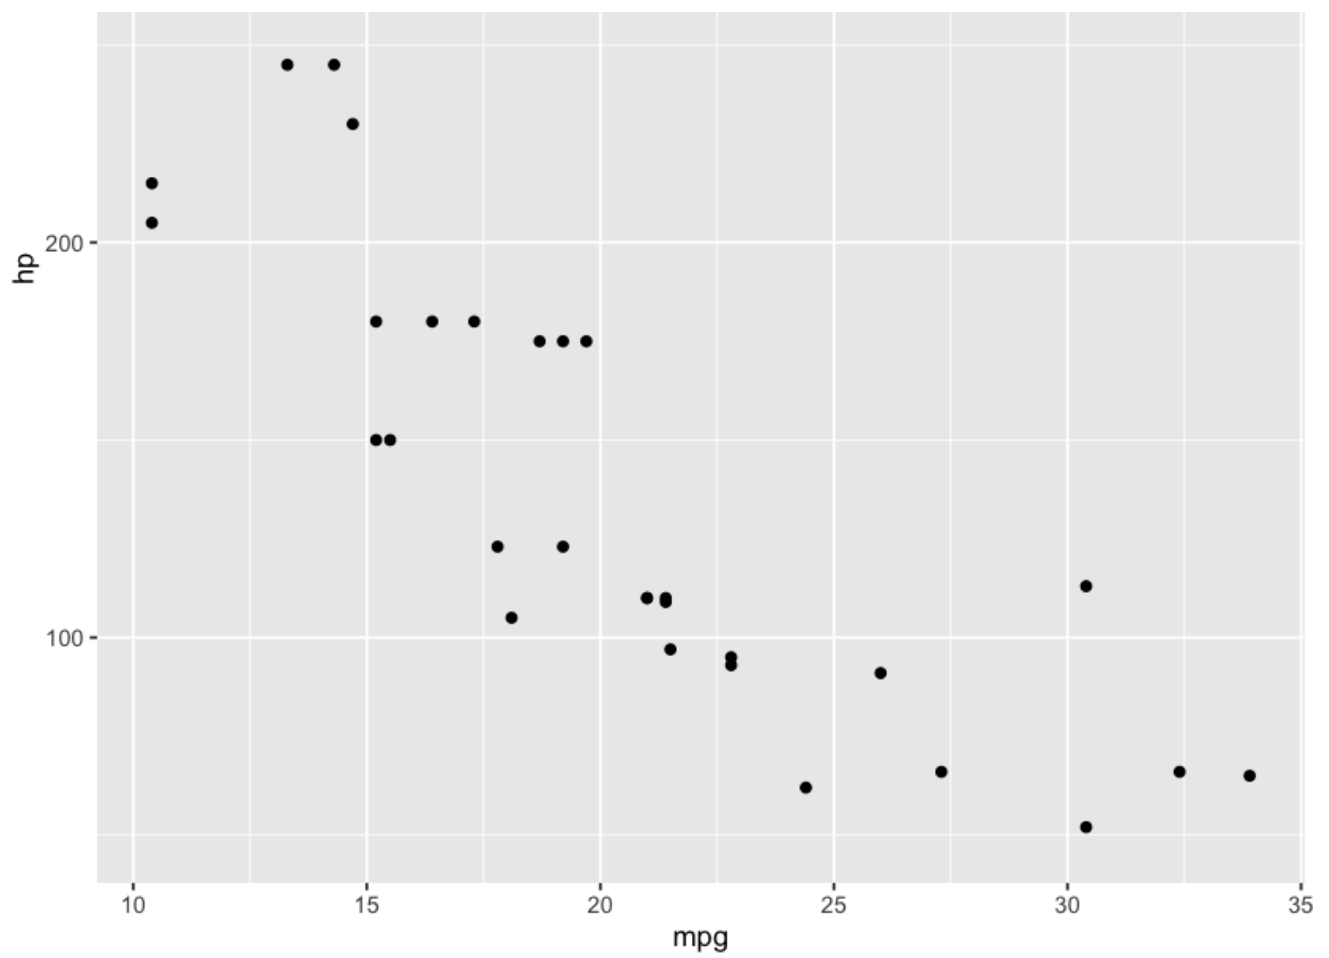

```
pl + theme_dark()
```

```
In [17]:
```

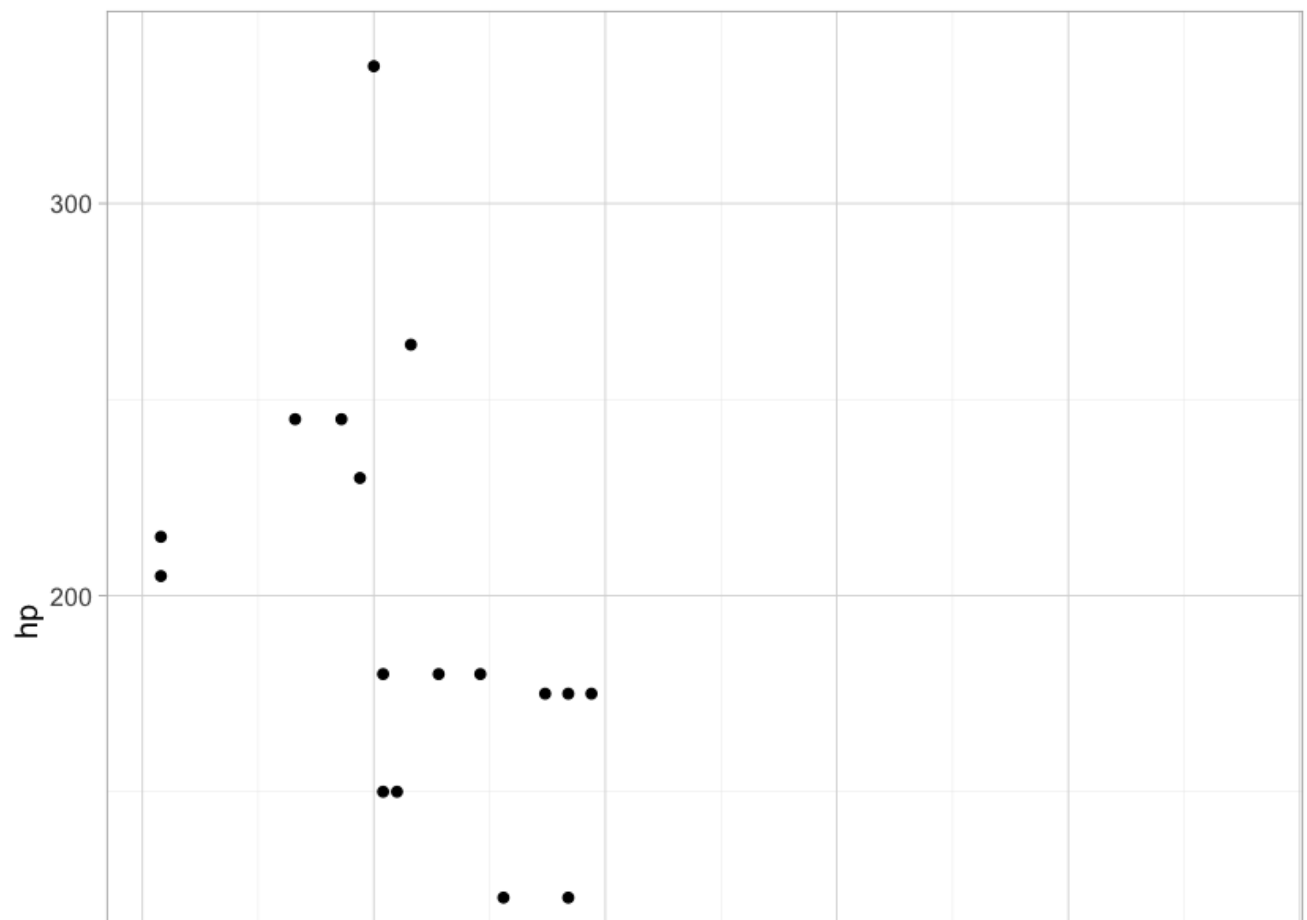

```
pl + theme_get()
```

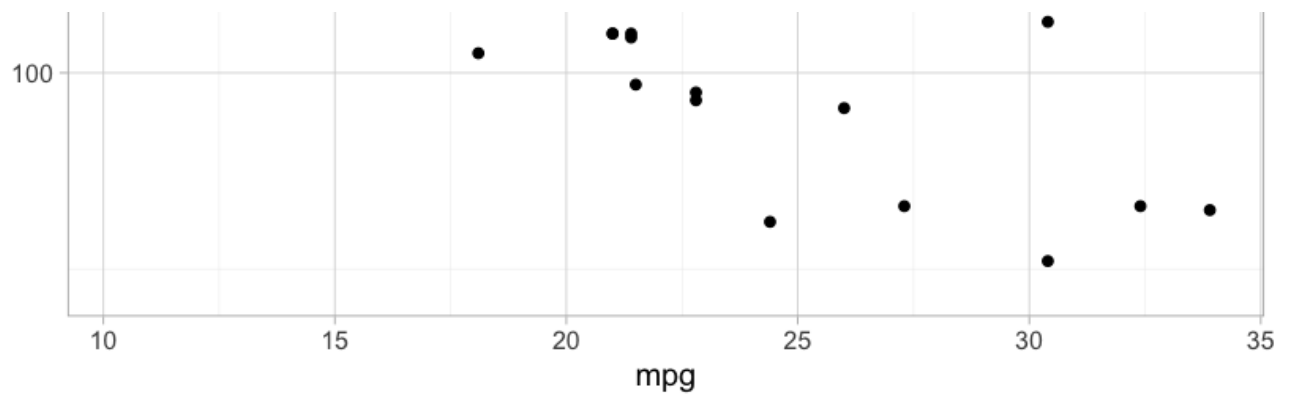

In [19]:

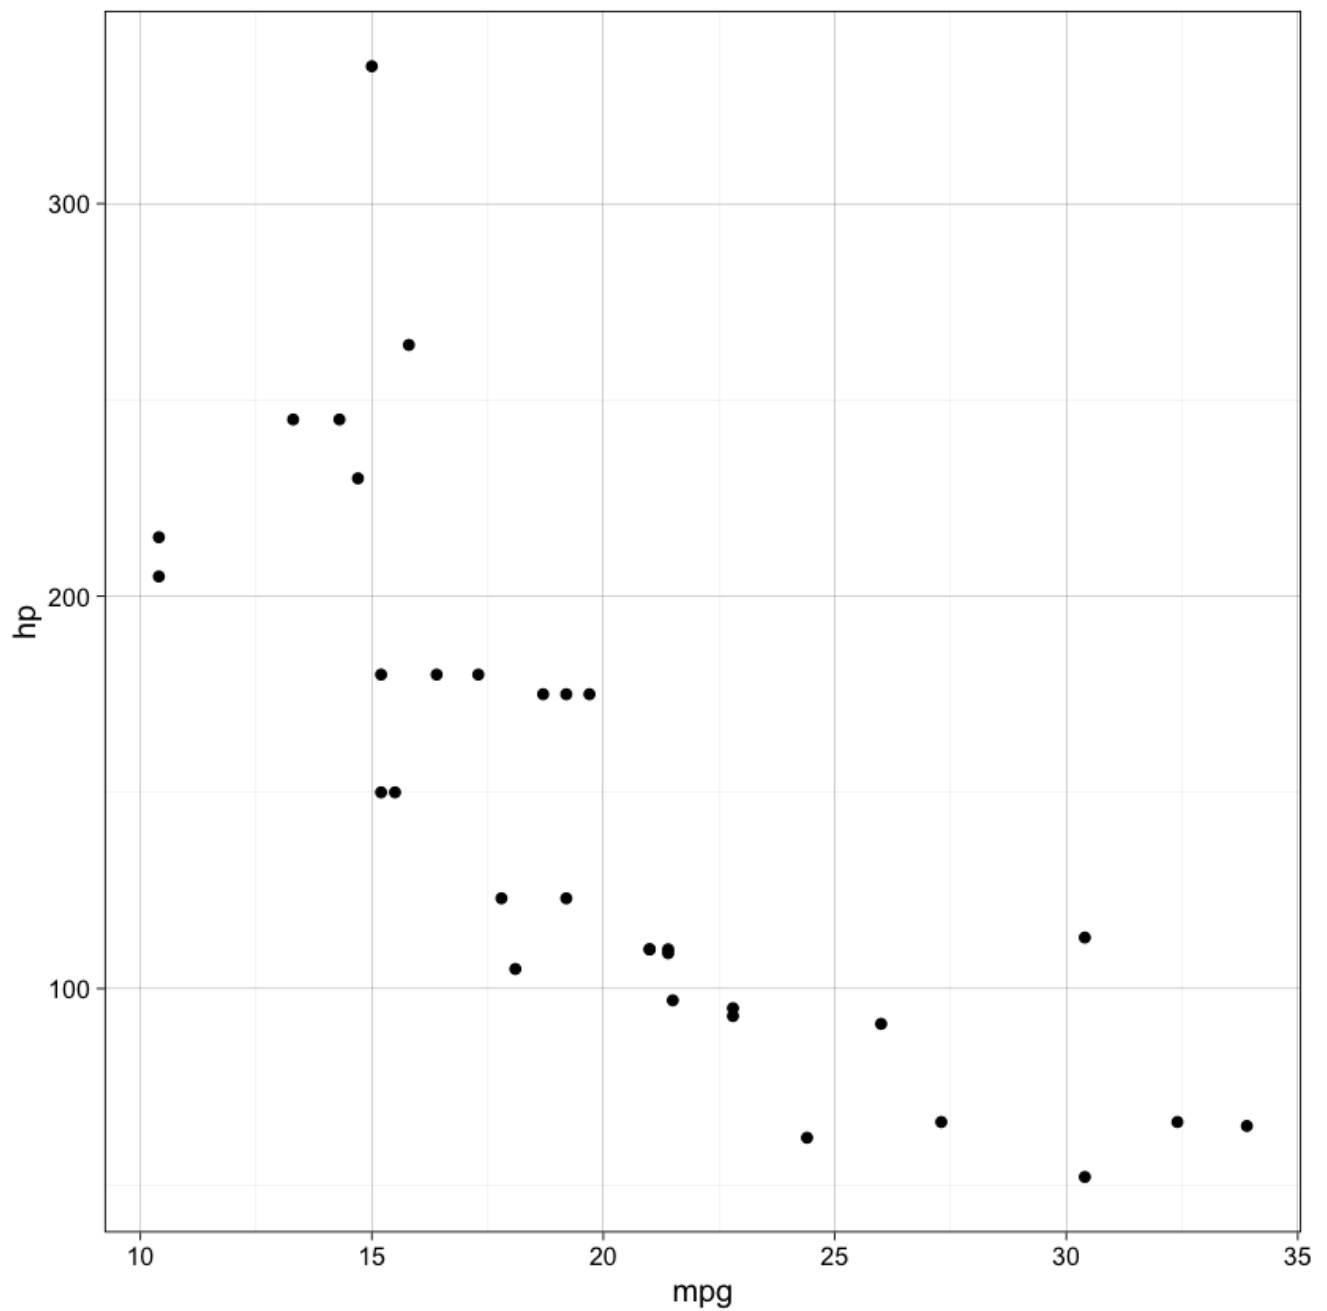

```
pl + theme_light()
```

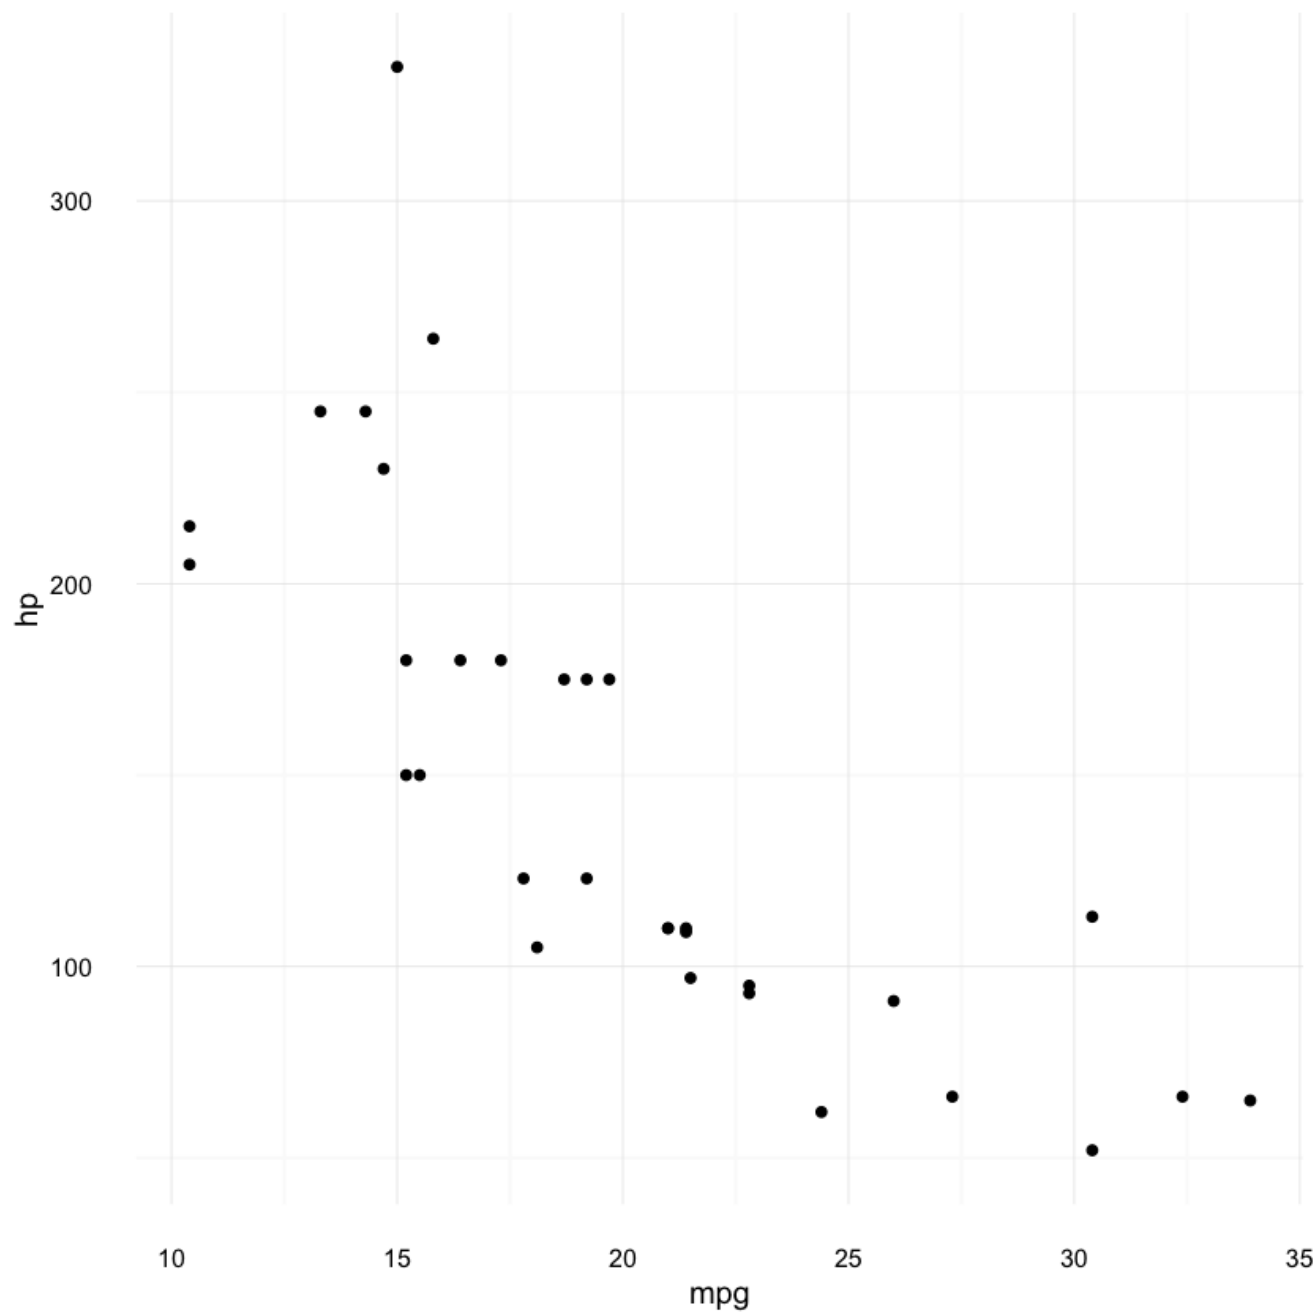

In [21]:

```
pl + theme_linedraw()
```

In [22]:

```
pl + theme_minimal()
```

In [25]:

```
pl + theme_void()
```

ggthemes

Here's a link to the [documentation for ggthemes](#). Let's see just a few examples:

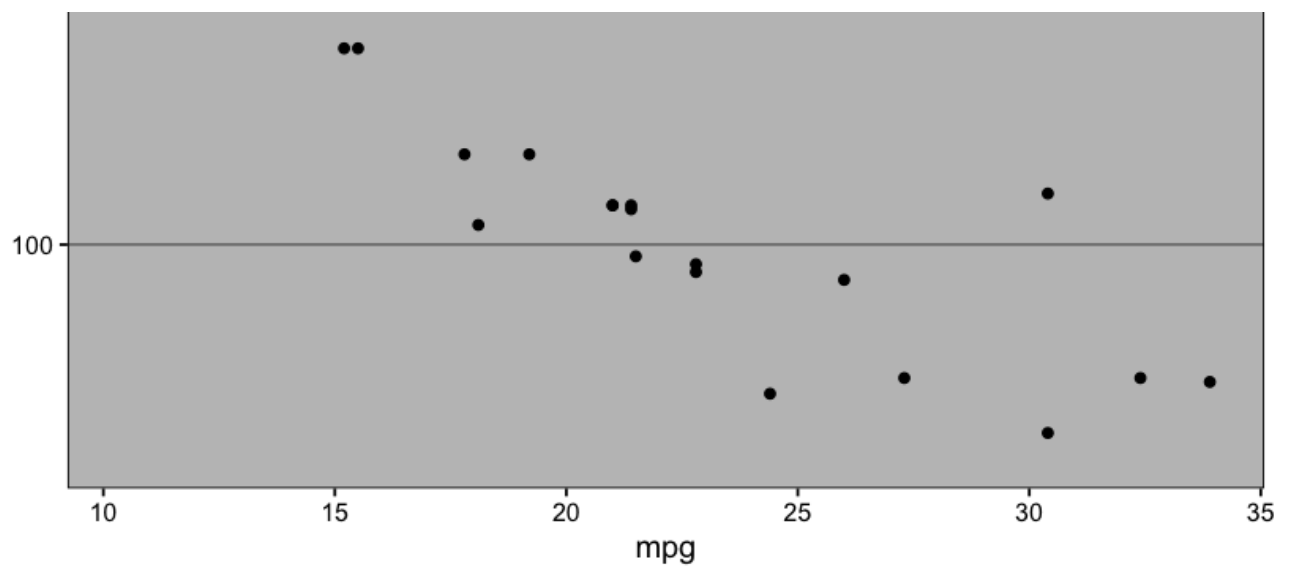

In [29]:

```
library(ggthemes)
```

In [31]:

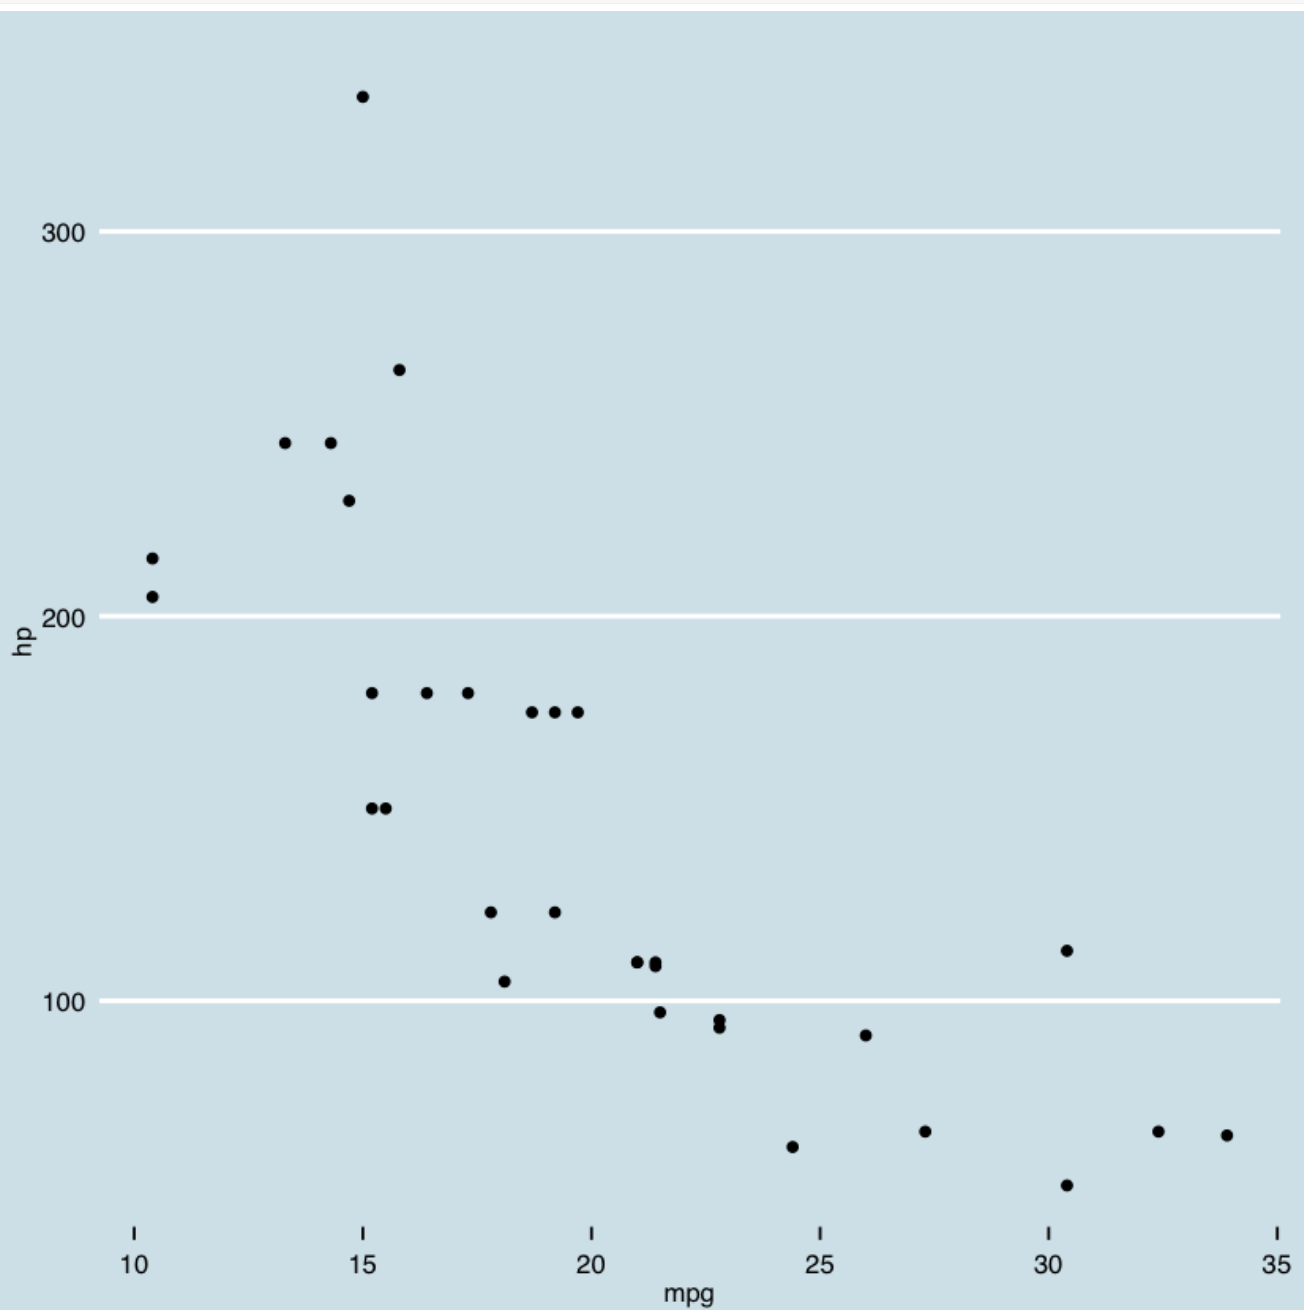

```
pl + theme_excel()
```

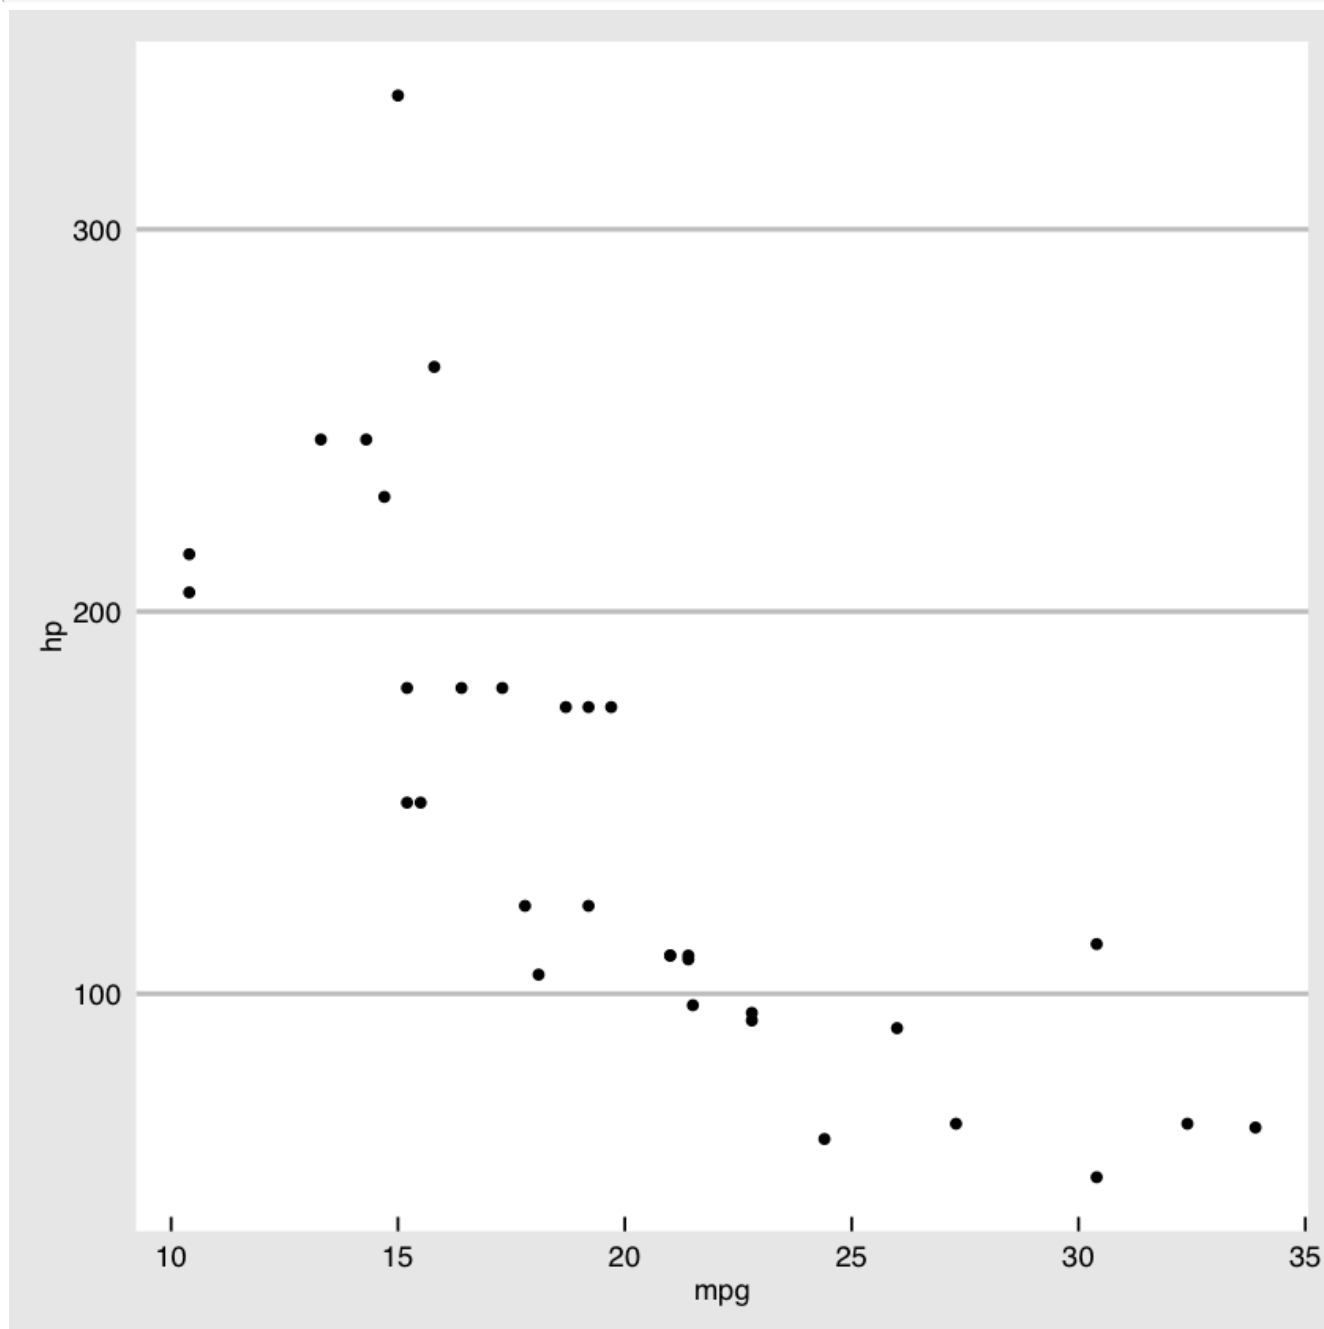

In [32]:

```
pl + theme_economist()
```

In [33]:

```
pl + theme_economist_white()
```

Custom Themes

If you want to make your own custom themes (although I would highly suggest you take the time to research for existing similar themes). You can create your own by following the [extensive documentation](#)
